

DANISH M. CHAUDHARY

Senior Software Engineer | Full Stack

React • Angular • TypeScript • Node.js • AWS • AI • IoT

New York City, NY | (929) 853-0344 | danishmehmud.works@gmail.com

Github: <https://github.com/danishmehmud> | **Portfolio:** <https://danishmehmud.github.io>

PROFESSIONAL SUMMARY

Senior Software Engineer (Full Stack) with **7+ years** of experience building scalable SaaS and enterprise applications across healthcare, ERP, CRM, e-commerce, airlines, POS, education, and event management domains. Specializes in building modern web applications with **React, Angular, TypeScript, Node.js, and NestJS**, while delivering **cloud-native**, AI & IoT-enabled solutions on AWS. Experienced in improving application performance, modernizing enterprise systems, integrating AI-assisted workflows, and delivering maintainable software within distributed Agile teams.

PROFESSIONAL EXPERIENCE

Semantic Health | *Canada (Remote)*

Apr 2023 – Present

Senior Software Engineer (Full Stack)

- Delivered end-to-end features across analytics, billing, subscription, and inventory modules for a healthcare SaaS platform supporting more than 7,000 users, owning features from technical design and client discussions through production release.
- Engineered interactive analytics dashboards using **React, TypeScript**, and **React Query** with configurable widgets, reusable data tables, responsive forms, and advanced filtering for high-volume healthcare workflows.
- Reduced dashboard load times by 40% through rendering optimizations, **lazy loading**, code splitting, Redis caching, and database query optimization
- Developed scalable **Node.js** services and REST and **GraphQL** APIs supporting authentication, billing, reporting, file management, and real-time healthcare workflows.
- Modernized delivery pipelines by introducing containerized microservices, automated **CI/CD** workflows, and AWS deployments, reducing infrastructure costs by **25%** while improving release reliability.
- Collaborated with clients, product managers, designers, and engineers to refine requirements, validate technical solutions, demonstrate product increments, and deliver production releases across Agile sprints.
- Expanded reusable **UI** components, documented shared patterns with **Storybook**, participated in code reviews, and mentored developers to improve consistency across multiple applications.

Selected Achievements

- Increased trial-to-paid conversion by **12%** by redesigning the subscription checkout flow.
- Reduced production issues in the billing platform by **60%** through stronger **API validation** and improved transaction handling.

CMU Nerds | *Dickinson, TX*

Jun 2019 – Mar 2023

Software Engineer (MEAN Stack)

- Developed enterprise-scale warehouse management, inventory control, order fulfillment, shipping, and logistics applications for a cloud-based third-party logistics (3PL) platform serving high-growth **eCommerce** businesses.
- Modernized a large **Angular** application by upgrading from **Angular 16 to 17**, introducing standalone components, **Angular signals**, and reusable architectural patterns that improved maintainability and accelerated future development.
- Designed and implemented a reusable frontend design system with shared UI components, internal **NPM** packages, and consistent theming, enabling multiple applications to share a common frontend foundation.
- Engineered backend services and real-time integrations using Node.js, **Express.js**, **NestJS**, **WebSockets**, **PostgreSQL**, **MariaDB**, and Redis to support inventory synchronization, billing automation, authentication, and order management workflows.

- Replaced spreadsheet-driven billing and third-party order synchronization processes with an internal automation platform, streamlining business operations, improving data accuracy, and simplifying payment and **inventory management**.
- Improved platform scalability through **Redis caching**, database optimization, automated testing, and backend architecture enhancements, increasing unit and integration test coverage to 88% while reducing QA regressions by 45%.
- Collaborated with clients and cross-functional teams to gather requirements, review technical solutions, resolve production issues, and contribute to architectural decisions across multiple enterprise products.

Selected Achievements

- Increased peak order processing capacity by 3× through workflow redesign and backend processing optimizations.
- Reduced support troubleshooting time by 35% by standardizing API error handling, structured logging, and backend diagnostics.

CORE TECHNOLOGIES

Frontend

React, Next.js, Angular, TypeScript, JavaScript (ES6+), Redux Toolkit, NgRx, React Query, HTML5, CSS3, SASS, Tailwind CSS, Material UI, Storybook

Backend

Node.js, Express.js, NestJS, REST APIs, GraphQL, WebSockets

Databases

PostgreSQL, MongoDB, MariaDB, Redis

Cloud / DevOps

AWS (EC2, ECS, Lambda, RDS, S3, CloudFront, SES, SQS), Docker, GitHub Actions, CI/CD, Microservices

Architecture

Component-Based Architecture, Design Systems, Atomic Design, Performance Optimization, Code Splitting, Lazy Loading, Server-Side Pagination, Infinite Scrolling, Virtual Scrolling

Authentication

JWT, OAuth, Firebase Authentication

Testing / Tools

Jest, React Testing Library, Unit Testing, Integration Testing, Git, Postman, Figma

AI & IoT

OpenAI API, LangChain, LangGraph, RAG, MQTT, Socket.IO, LLM

SELECTED PROJECTS

Enterprise AI & IoT Monitoring Platform (Semantic Health)

React • Node.js • MQTT • Socket.IO • OpenAI • LangChain • AWS

- Built an enterprise **AI & IoT** platform that centralized monitoring and control of connected building infrastructure, including HVAC systems, surveillance cameras, lighting, and fire safety equipment.
- Developed real-time web applications using **React, Node.js, MQTT, Socket.IO, and PostgreSQL** to support device communication, centralized operations, and remote automation across enterprise facilities.
- Integrated **OpenAI APIs, LangChain, LangGraph, and RAG** to build AI-powered assistants, intelligent workflows, and contextual operational support for facility management.

E-Commerce Microservices Platform (CMU Nerds)

Next.js • NestJS • RabbitMQ • Docker • Terraform

- Designed a modular **microservices** architecture for product catalog, orders, payments, and inventory services.
- Implemented asynchronous communication using **RabbitMQ** and containerized services with **Docker**.
- Configured **CI/CD** workflows and infrastructure automation while validating horizontal scalability under simulated production load.

CERTIFICATIONS

Certified JavaScript Developer — Frontend Masters (2022)

EDUCATION

Bachelor in Computer Science | University of Windsor, Canada - Oct-2018
